NOAA Technical Memorandum NMFS

The National Marine Fisheries Service's Alaska Fisheries Science Center uses the NOAA Technical Memorandum series to issue informal scientific and technical publications when complete formal review and editorial processing are not appropriate or feasible. Documents within this series reflect sound professional work and may be referenced in the formal scientific and technical literature.

The NMFS-AFSC Technical Memorandum series of the Alaska Fisheries Science Center continues the NMFS-F/NWC series established in 1970 by the Northwest Fisheries Center. The new NMFS-NWFSC series will be used by the Northwest Fisheries Science Center.

This document should be cited as follows:

Wilkins, M. E. and K. L. Weinberg. 2002. Appendices to the 2001 Pacific west coast bottom trawl survey of groundfish resources: Estimates of distribution, abundance, and length and age composition. U. S. Dep. Commer., NOAA Tech. Memo. NMFS-AFSC-128.

Reference in this document to trade names does not imply endorsement by the National Marine Fisheries Service, NOAA.

This document is being made available in .PDF format for the convenience of users; however, the accuracy and correctness of the document can only be certified as was presented in the original hard copy format.

INTRODUCTION

The information appended in this volume is provided for those interested in the detailed results of the analyses performed on the catch and biological data collected during the National Marine Fisheries Service's 2001 West Coast triennial bottom trawl survey of groundfish resources. The format in which the information is presented in this document has not been scrutinized by editorial staff and thus should not be referenced in a scientific publication. The three appendices are intended to be used in association with the summaries included in NOAA Technical Memorandum NMFS-AFSC-128. These appendices provide summarized station and catch data, relative rankings and absolute catch rates in terms of CPUE (kg caught per hectare trawled) of fish and invertebrates within various International North Pacific Fisheries Commission (INPFC) areas and depth strata, and abundance estimates (population numbers and biomass) for the most commercially or ecologically important species.

To avoid excess printing, abundance and size and age compositions estimates have not been included for many of the less important fish and invertebrates, though these estimates can be easily calculated upon request. Electronic data files containing the results of any of these analyses are available from the authors or other staff listed below.

<i>To request data files or special analyses, please contact:</i>

TABLE OF CONTENTS

Appendix A. Haul and Catch Data Summary	A-1
Table A-1. Station and catch data for stations sampled by the F/V <i>Frosti</i>	A-2
Table A-2. Station and catch data for stations sampled by the R/V <i>Sea Storm</i>	A-27
Appendix B. Relative Abundance of Species by Area and Depth Stratum	B-1
Tables B-1 through B-4, the INPFC Conception Area	B-2
Tables B-5 through B-8, the INPFC Monterey Area	B-15
Tables B-9 through B-12, the INPFC Eureka Area	B-31
Tables B-13 through B-16, the INPFC Columbia Area	B-45
Tables B-17 through B-20, the U.S. Portion of the INPFC Vancouver Area	B-66
Tables B-21 through B-24, the Canadian Portion of the INPFC Vancouver Area	B-78
Tables B-25 through B-28, the INPFC Vancouver Area	B-89
Tables B-29 through B-32, the U.S. Portion of the Survey Area	B-104
Tables B-33 through B-36, the Entire Survey Area	B-134
Appendix C. Estimates of Abundance in Numbers and Biomass	C-1

APPENDIX A

HAUL AND CATCH DATA SUMMARY

Appendix A contains information from the 2001 West Coast triennial bottom trawl survey data about each haul's location, depth, performance codes, measures of effort in time and distance, and amount caught (kg) for selected important species or species groups. Geodetic positions are displayed in the table as degrees and decimal minutes, e.g. 12346.39 corresponds to 123°46.39'W longitude. Appendix Table A-1 contains information from the F/V *Frosti* and Table A-2 contains information from the F/V *Sea Storm*.

Haul performance is coded as to any problems which occurred during the trawl haul and whether or not the haul was accepted as a successful sample; negative codes indicate unsuccessful hauls. Performance codes that appear in this appendix are as follows:

<u>Code</u>	<u>Explanation</u>
-5.6	Unsatisfactory performance, codend not closed properly
-5.41	Unsatisfactory performance, doors digging or falling over
-5.1	Unsatisfactory performance, net came off bottom
-2.4	Unsatisfactory performance, belly damaged
0	Good performance
3	Satisfactory performance, gear conflict, unspecified
3.1	Satisfactory performance, caught pot, unspecified type
4	Satisfactory performance, caught unspecified object
4.1	Satisfactory performance, caught large rock
4.3	Satisfactory performance, caught debris or wreckage
5.1	Satisfactory performance, net came off bottom

Table A-1.--Station and catch data (kg caught) by major species groups for stations fished by the *Frosti*.

APPENDIX B

RELATIVE ABUNDANCE OF SPECIES BY AREA AND DEPTH STRATUM

Appendix Tables B-1 through B-36 list all fish and invertebrate species encountered in each depth stratum of each International North Pacific Fisheries Commission (INPFC) area of the 2001 West Coast triennial bottom trawl survey. Species in each table are listed in order of decreasing relative abundance, measured by average catch per unit of effort (CPUE, in units of kg/ha). Average CPUE values have been weighted by the size of the sampling strata. For each INPFC area, tables are presented for the shallow (55-183 m), middle (184-366 m), and deep (367-500 m) depth strata, as well as for the entire INPFC area. Tables B-29 through B-32 list the relative abundance of species in the U.S. portion of the survey area and Tables B-33 through B-36 present the relative abundance listings for the entire survey area.

Tables B-1 through B-4, the INPFC Conception Area	B-2
Tables B-5 through B-8, the INPFC Monterey Area	B-15
Tables B-9 through B-12, the INPFC Eureka Area	B-31
Tables B-13 through B-16, the INPFC Columbia Area	B-45
Tables B-17 through B-20, the U.S. Portion of the INPFC Vancouver Area	B-66
Tables B-21 through B-24, the Canadian Portion of the INPFC Vancouver Area ...	B-78
Tables B-25 through B-28, the INPFC Vancouver Area	B-89
Tables B-29 through B-32, the U.S. Portion of the Survey Area	B-104
Tables B-33 through B-36, the Entire Survey Area	B-134

Table B-1.--Rank order of relative abundance (kg/ha) for fish and invertebrate species in the INPFC Conception shallow stratum (55-183 m).

Rank	Species name	Mean CPUE (kg/ha)	Proportion	Cumulative proportion
1	<i>Sebastes goodei</i>	88.421	0.5241	0.5241
2	<i>Citharichthys sordidus</i>	40.756	0.2416	0.7657

APPENDIX C

ESTIMATES OF BIOMASS AND POPULATION NUMBERS

The tables in Appendix C present the estimates of biomass and population numbers, along with their associated variances and coefficients of variation (CV), derived from the results of the 2001 West Coast triennial bottom trawl survey. Abundance estimates are provided for each depth stratum of each International North Pacific Fisheries Commission (INPFC) area, as well as for the entire survey area and the U.S. portion of the survey area. Estimates are presented for the most commercially or ecologically important species in alphabetical order, though users are cautioned to regard estimates of pelagic and semi-pelagic species as conservative minimum estimates. The following species are included in this appendix:

American shad	Pacific herring
Arrowtooth flounder	Pacific ocean perch
Bocaccio	Pacific sanddab
Canary rockfish	Pacific sardine
Chilipepper	Petrale sole
Chub mackerel	Redstripe rockfish
Darkblotched rockfish	Rex sole
Dover sole	Sablefish
English sole	Sharpchin rockfish
Eulachon	Shortbelly rockfish
Greenstriped rockfish	Shortspine thornyhead
Jack mackerel	Silvergray rockfish
Lingcod	Spiny dogfish
Longspine thornyhead	Splitnose rockfish
Northern anchovy	Stripetail rockfish
Pacific hake (whiting)	Widow rockfish
Pacific halibut	Yellowtail rockfish

American shad
